

FLEXI RETAIL SOFTWARE

COMPLETE RETAIL MANAGEMENT SOLUTION

Point of Sale, Inventory,
Orders & Analytics

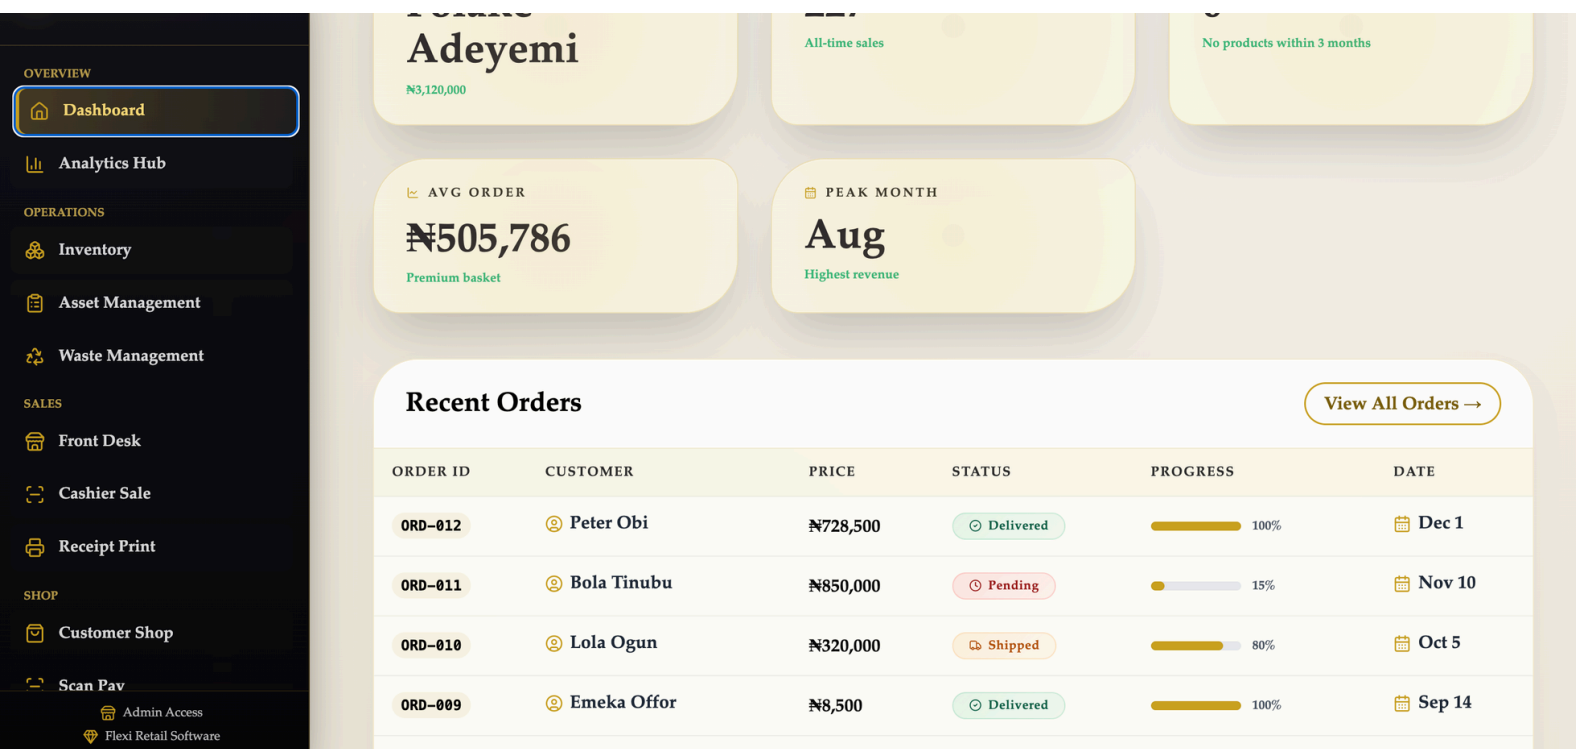

www.flexisoftware.ng

FLEXI RETAIL SOFTWARE

Flexi Retail Software is an all-in-one retail management platform built for Nigerian retail businesses: supermarkets, grocery stores, pharmacies, boutiques, and multi-till shops. It brings the cash desk, the storeroom, the customer, and the manager's report into one secure system, so every sale is recorded, every unit of stock is accounted for, and every decision is backed by real numbers.

From barcode scanning at the front desk to expiry alerts in the storeroom and delivery tracking for online orders, Flexi Retail replaces paper records, scattered spreadsheets, and guesswork with a single source of truth.

A COMPLETE RETAIL MANAGEMENT

Point of Sale, Inventory, Orders & Analytics; Modern web application runs in any browser on desktop, tablet, or mobile; no per-machine installation

WHY FLEXI RETAIL

- **One source of truth:** Every transaction is saved centrally and instantly, no sales lost to a cleared browser, a stolen notebook, or a forgotten entry.
- **Accurate stock, always:** Stock reduces automatically the moment a sale is completed, with safeguards that prevent two tills from selling the last unit at the same time.
- **Role-based control:** Admins, cashiers, and customers each see only what their role permits, down to individual pages.
- **Built-in accountability:** Prices are enforced by the server, logins are rate-limited, and every sale is attributed to the logged-in cashier: not a name typed into a box.
- **Made for the Nigerian market:** Naira-native formatting, local payment habits (cash, POS, transfer), and workflows designed around how Nigerian shops actually run.

CORE MODULES

INVENTORY & PRODUCT MANAGEMENT

Full control of what you stock, what it costs, and when it expires.

- **Product catalogue:** names, SKUs, barcodes, descriptions, images, prices, and stock levels in one searchable table.
- **Attributes & variants:** capture sizes, colours, pack weights, and multiple variants per product.
- **Expiry tracking:** expiry dates per product with automatic warnings months before goods go bad.
- **Bulk import:** load an entire product list from Excel in one step.
- **Front-desk visibility:** choose exactly which products cashiers can sell, and hide the rest.

Inventory

Create and manage product stock, expiry dates, images, attributes, and variants.

Admin Product Creation

Add products here so front desk can see current names, prices, and stock.

FRONT DESK / CASHIER POINT OF SALE

A fast, keyboard-and-scanner-friendly till screen for daily selling.

- 01** **Scan or search:** add items by barcode, SKU, or product name with instant suggestions.
- 02** **Basket management:** quantities, line totals, discounts, and stock-aware limits.
- 03** **Quick list import:** paste a list of SKUs and quantities to build a large basket in seconds.
- 04** **Cash & POS payments:** mark the payment method and complete the sale in one tap.
- 05** **Automatic stock deduction:** completed sales reduce inventory immediately and safely.
